

Using the latest biometric technology, RSI has built a login system for tracking timesheets. Our system supports multiple security levels and is designed to integrate with your accounting suite.

**Digital Accuracy**

Employees will be paid exactly what they're owed, payroll administration costs will plummet, and the new system will eliminate messy timecards and time sheets. Traditional identification methods, such as badges, PINs (personal identification numbers), and passwords don't accurately authenticate the individual since these devices are easily transferable. Only biometric readers authenticate people by unique, unalterable physical characteristics.

Manager enrolling a user for the first time

**Multiple Locations Connected**

From one side of the world to the other, from the corporate office to a satellite office, our system connects them all together. Remote access to these systems is Windows authentication protected. The DigiClock system allows a central computer in your human resources department to handle any changes that need to be made.

Step by step instructions on enrolling a user

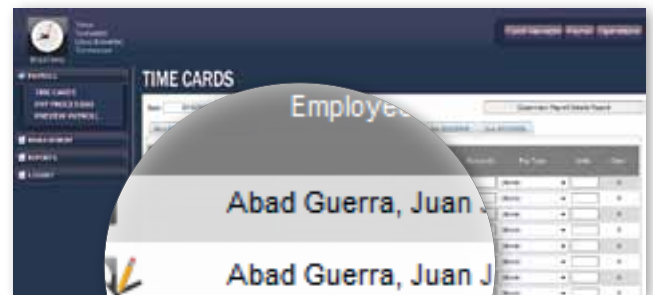

**Speed of a Login**

The time clock is obsolete. It still requires labor to manage all of the times and look for discrepancies. The DigiClock system does all of that for you. All you need is a finger or thumb and you are logged in. Within a second your "digit" sends your login info to the system for immediate authentication.

**Payroll**

If you have ever had to deal with payroll, you may understand just how valuable an organized payroll system really is. Dealing with timecards or time sheets can be a real hassle. Nothing is better than knowing that the raw data you have in your payroll system is as accurate as possible.

**Save Money, Work Less**

In addition to the accuracy that this system allows for, using biometrics with an automatic payroll system can save a company literally hundreds of hours of labor per year. The reporting options available by using this system also carries over to the tax implications. The DigiClock systems allow you to keep track of employee sick and vacation days, wage or salary increases, and to correctly determine federal and state withholding information. This also reduces the need to keep paper files for employees, such as stored timecards from years past.
